Rocket software

Rocket® Uniface Application Development Platform

Create, scale, and secure applications faster while ensuring deployment portability across platform vendors and cloud providers

The demands placed on your IT teams have never been greater. Rocket's Uniface Application Development Platform is a model-driven, low-code environment enabling rapid development and modernization of business-critical enterprise applications. With Uniface, you can deploy existing IT resources more efficiently and bring new products to market faster.

Benefits/Features

Trusted
Rocket Uniface has powered core applications for the world's largest enterprises for nearly four decades, supporting thousands of applications and millions of users.

Sustainable
Migrate to new technologies easily with minimal overhead or rework. Reuse valuable code and mitigate redundancy and error.

Secure
Feel confident knowing Rocket Uniface is always certified on the latest security updates available from our partner vendors. We engage an independent, third-party auditor to test our web deployment components to ensure objective auditing.

Agile
Seamlessly respond to market trends by developing and deploying high-performing applications in record time with our market-leading low-code technology.

Compatible
Our deployment environment is compatible with many platforms, including Microsoft Windows, Linux, proprietary UNIX, and IBM® i so you can develop applications that work on any hardware platform or operating system.

Unmatched Support
The Rocket Uniface global support network ensures successful deployment and ongoing success in production and beyond.

What our customers have to say

"Our partnership with Uniface has enabled Pernod Ricard to implement standardized data collection and management processes across the board while also giving brands the freedom to implement unique processes that are specific to their operations."

JEAN-FRANCOIS BERNARD
IT Vice President—Spirit Management Solutions
Pernod Ricard

With Rocket® Uniface application development platform you can drive market opportunity, increase business agility and realize flexible deployment options.

Develop applications your users love
Drive better engagement through superior UX and simplified on-boarding. You'll reduce the friction typically associated with implementations and upgrades, while promoting CI/CD.

Increase business agility
Quickly and securely design and deliver a scalable, sustainable solution. Our contemporary low-code development tools help you reduce development time and accelerate application modernization.

Gain deployment flexibility
Expand application use with BYOD capabilities and SaaS computing. Facilitate access for customers, partners, and WFH employees.

Develop applications that last.
Deploy microservices to break up your applications and make them independent and easier to scale. You can meet the big-scale needs of modern businesses while developing stable applications that last.

Why partner with Rocket Software?

Your success is central to our mission. With Rocket Uniface, you can access a global support network to ensure applications are successfully deployed and robustly championed in production enabling you to bring products to market faster.

Education services to enable your success and drive satisfaction.

Access to Rocket's global user community for best practices and guidance implementing them.

A partner program dedicated exclusively to supporting our collaborators.

The future won't wait—modernize today.
